

IT DOESN'T COST THE EARTH

Introducing Spring-fresh™ water retaining, compostable plant pots

BioPak are pleased to announce the Australian launch of *Spring-fresh™* plant pots. With unique water retaining walls, *Spring-fresh™* pots nurture plant growth, reduce water loss and allow plants to be placed in the ground without root disturbance.

***Spring-fresh™* plant pots have super-absorbent materials integrated into the walls of the pot itself. When saturated, the pot provides a slow-release reservoir of water around the roots of the plant to keep it moist and cool.**

Simply fill the *Spring-fresh™* pot with compost and insert the plant, plug or cutting as usual. Soak or immerse the pot in water for a few minutes. The pot will soak up the water and release it slowly into the growing medium

***Spring-fresh™* pots are made from natural, plant-based, compostable materials. They can be planted in the ground with the plant and will completely bio-degrade in weeks. *Spring-fresh™* pots are available as individual containers or multi-bay units for plugs and seedlings. They are available in various sizes to meet all applications.**

- ✓ ***Nurtures and encourages plant growth***
- ✓ ***Stores water in the walls of the pot. Maintains a controlled water content in the growing medium***
- ✓ ***Reduces watering frequency and prevents drying-out and wilting***
- ✓ ***Light, flexible and easy to use,***
- ✓ ***Fully compostable – Plant the pot without root disturbance. Pot bio-degrades completely in weeks***
