

BIOCUPS

REDUCING YOUR ENVIRONMENTAL IMPACT

We encourage people to bring their own cups. When this is not practical or convenient, bioplastic lined BioCups and lids are the most sustainable alternative.

RECYCLABLE

BioCups are currently being recycled in many Australian Councils. Independent research shows that bioplastic lining is significantly easier to recycle than PE plastic cup lining.

Find out if your Council recycles cups:

COMMERCIALLY COMPOSTABLE

BioCups and lids are certified commercially compostable, offering an opportunity to divert organic waste from landfill. It also supports the growth of the organic recycling infrastructure.

LANDFILL

It is often overlooked but the raw material used in the manufacturing of a product is responsible for most of its environmental impact. The production of PLA bioplastic emits up to 75% less carbon emissions than the conventional plastic it replaces. So a PLA lined cup is a much more sustainable option than a PE lined cup – even if they both end up in landfill.

Know the facts

The total amount of paper landfilled in Australia each year is 1.7 million tonnes, of which coffee cups account for 12,000 tonnes. Let's work together to get all paper cups recycled!

Contact your council.

Paper is sustainably sourced from certified managed plantations

Ingeo PLA bioplastic is made from plants not oil

Ingeo PLA bioplastic dissolves during the paper recycling process

Ingeo PLA lids and coated cups are compostable in a commercial facility

The carbon footprint of Ingeo PLA is up to 75% less than conventional plastic
